Mantech Systems Company Limited

About

Mantech Systems Company Limited

Mantech Systems Company Limited is a leading specialist in the world of Information and Communications Technology (ICT) offering dynamic services and specialized support, we are committed to providing comprehensive solutions and services to businesses and focused strategic consulting services to enterprise businesses.

Our team have deep expertise across a broad range of disciplines and are focused on delivering on the business outcomes you require. We are here to help you use technology as a business enabler.

As Saudi Arabia's leading strategic and proactive IT support and IT services team we transform organizations, so they can better leverage Information Technology to achieve their business goals.

We are associated with reputed Principals, who are global leaders in their respective fields, to create a portfolio consisting of a variety of products, solutions and services. This empowers us to understand even the most complex customer requirements and provide simplified solutions by picking the appropriate mix to address those needs precisely.

Digital Transformation

Reach Your Digital Transformation Goals

Innovation services and consulting help you achieve greater efficiency in your IT Operations, Optimize your cloud resources, refactor applications to take advantage of new platforms, harness the power of business analytics, and modernize your processes and infrastructure.

Every company is at a different point on the path to digital transformation. Wherever you are, we're there to help you along your journey. With a vast network of vendors, cloud service providers, and IT experts we deliver customized solutions that help you grow today, tomorrow and in the years to come.

Migrations & Installations

Rely on the experts—Mantech has performed hundreds of secure migrations and installations. We'll get it right for you the first time.

Business Insights & Analytics

It's time you put your data to work. Harness the power of Power BI, PowerApps, and other data platforms to gain key insights.

Professional Assessments

Let our experts' future proof every aspect of your organization—from backup and security to collaboration.

Managed IT Service

Accelerate your path to digital transformation with a vast array of managed services.

Azure & Office 365

Say goodbye to fluctuating cloud costs and gaps in communication—or security

IT Modernization

Mantech can help you design a roadmap to modern IT operations that efficiently use Azure or multi-cloud technologies.

A woman with blonde hair tied back, wearing a white lab coat, is looking towards the left. In the background, there are server racks with blue cables and green lights. A chain-link fence is visible behind her. The image is overlaid with a large blue and white geometric shape on the left side.

IT Infrastructure Consulting Service

Your organization may own and manage a data center, or you may use a data center owned or managed by a service provider. Either way, you need to look across the IT Infrastructure and facilities and effectively plan, build and manage the infrastructure for increased efficiency, agility and business continuity Transform your IT landscape with effective infrastructure management solutions offered by ManTech's IT Infrastructure Services. ManTech will help deliver these promises to you by utilizing the expertise of our data center experts around six main areas.

CORNING

Parking Gate Barrier Solution

Gate Barriers control the vehicle access at entry, exit gates. It consists of a fixed metal block that carries the barrier arm which operates electronically and is capable of blocking unidentified vehicles both at entry and exit gates. The main benefit of installing our Gate Barrier Solution is that the system works efficiently without any noise providing the users a seamless experience.

Being a reputed supplier of Gate Barriers in the Middle East, we always make sure that our customers can control their parking facility smoothly and efficiently. Built in with the latest technology.

Fingerprint Biometric Solution

Biometric recognition technology is being used increasingly more in security, and fingerprint recognition (biometric fingerprint) is currently the most commonly used biometric technology for physical access control. It makes sense – people are already used to using fingerprints to verify themselves on their smartphone and there are many benefits to fingerprint recognition. Enrolling and presenting a fingerprint is relatively easy. And the combination of a low price point and high accuracy levels make it a good choice for many access control applications, especially those where fewer people need access.

Access Control Systems

Access Control Systems is a type of door lock that is intelligent and versatile in function. It enables you to secure entry points by only authorizing access to individuals who belong in the building. But what's more than just security that access control systems can offer is the option for you to choose the type of access. Fingerprint, Facial recognition, Card Access, Custom ID Code. Go even further by using it as a time attendance system for employees to clock in and clock out. You can even check who entered and when. All of these features just a software away. Pair it with surveillance systems that watch over the entry points and you can achieve maximum security.

Our logistics processes, services, tools and systems in combination with strategic entry point locations help you to meet your security needs and achieve security with much more accuracy. Moreover, our project engineers are experienced in applying security solutions to large scale buildings and properties. Whether it is the one time installation you need done, or whether you are looking for professional and long-term asset management or tech support requirements, we can assure you of the best services at the most economical pricing. Our sales and logistics consultants are always available to help you with any further and detailed queries you might have regarding our services and security solutions.

Public Address System (PA system)

A public address system (PA system) is an electronic system comprising microphones, amplifiers, loudspeakers, and related equipment. It increases the apparent volume (loudness) of a human voice, musical instrument, or other acoustic sound source or recorded sound or music. PA systems are used in any public venue that requires that an announcer, performer, etc. be sufficiently audible at a distance or over a large area. Typical applications include sports stadiums, public transportation vehicles and facilities, and live or recorded music venues and events. A PA system may include multiple microphones or other sound sources, a mixing console to combine and modify multiple sources, and multiple amplifiers and loudspeakers for louder volume or wider distribution.

Simple PA systems are often used in small venues such as school auditoriums, churches, and small bars. PA systems with many speakers are widely used to make announcements in public, institutional and commercial buildings and locations—such as Schools, Stadiums, Passenger Vessels and Aircraft Intercom Systems.

Master Clock System

Master Clock is an electronic device which provides time synchronization signals to several slave clocks on a network. They maintain accurate time from a hardware clock source like GPS, GLONASS, Galileo or other sources of precise time. Master Clock Systems are centralized clock systems which use GPS/Wi-Fi technology to show the exact time across the facility to regulate and uphold same time across all the clocks, display devices, and controlled devices in and around the place. It is a process in which timing system is synchronized using a "master clock" which can work with every other clocks and device connected to it.
